

# What to do in case of CYCLONE?

Identify the five alert levels when a tropical cyclone approaches our territory

## LEVEL 1 Minimum hazard

Stay tuned to weather information.

## LEVEL 2 Low hazard

Prune trees that obstruct electrical cables and others dangerous situations.

Protect windows with adhesive tape in cross shape and secure objects that may be thrown away by the wind.

Clean up the roofs, drains, channels, and floor drains. Avoid littering.

## LEVEL 3 Moderate hazard

Identify the nearest temporary refuge and the route to get over quickly.

Store food, drinking water, and handy emergency supplies.

Keep important documents in plastic bags.

## LEVEL 4 High hazard

If your home is not safe, leave and get to a shelter.

If you live near a river or a pond, keep watch on the water level.

Close doors and windows, shut off the gas and electricity supplies.

## LEVEL 5 Maximum hazard

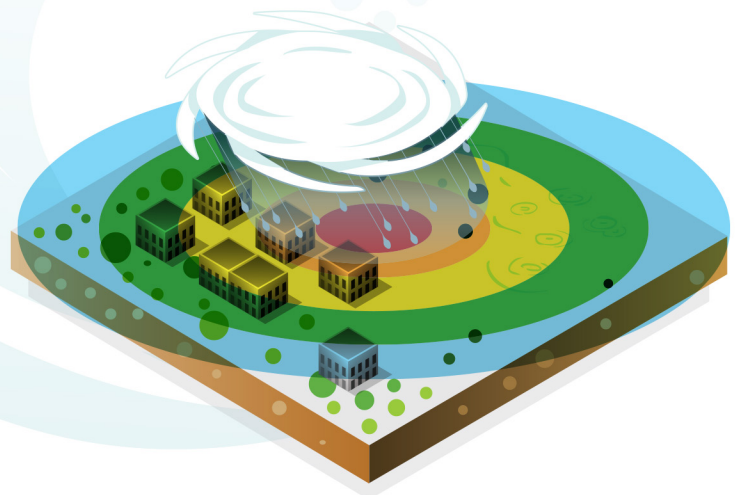

Stay away from windows to prevent injury if they break.

Remain at home or shelter until authorities report that the hazard is over.

Remain calm and keep yourself informed.
